LEARNING DIARY, <BACK-END 2020-21> MODULE

LEARNING DIARY

26.10.2020

I went through the course general information as well as course requirements. I checked the required environment of the course. As I used to study a little bit front-end before, I am familiar with version control thus I skip this part. I am also familiar with VS Code thus I choose this one as my code editor for this course.

I watch REST intro instruction video and get the concept of what REST API is and follow some examples in the video.

27.10.2020

I already installed Node.js. I learned about path, url.... I mainly focused on the process of creating an HTTP server and deploying it to Heroku.

28.10.2020

I learned MongoDB and ExpressJs. I practice by coding along with the introduction videos.

29.10.2020

I did the exercise based on what I have learnt and followed the example code.
